| Tuna: Bluefin Tuna ¹⁰ | | | | | | | | | | | | |
| Whiting | | | | | | | | | | | | |

This chart reflects our experience with periods local catch is available at market. Availability also varies in accordance with regulations created by the Massachusetts Division of Marine Fisheries and the National Marine Fisheries Service. They continually study and determine when each type of fish may be legally caught, and at what size, in any given season (see www.nmfs.noaa.gov/fishwatch). Note also that commercial rules are often different from sport fishing rules.

¹The August Black Seabass season continues only until quotas are reached. ²Clams are available year round. but supplies can be more limited during difficult winter weather. ³Summer flounder, also known as fluke, are found here May to September, but the season is usually shorter, ending when quotas are reached. ⁴Lobster inhabit our waters year round, but we see them mainly in summer and fall because handling lobstering gear in heavy winter weather is difficult, also care must be taken to ensure gear stays out of the way of spring right whale migration. ⁵Oysters are available year round, but they are somewhat fewer in winter when icy weather makes harvesting difficult. Oysters are plumpest in late spring-early summer, then again in fall. ⁶The sea scallop season opens March 1st. From that point, sea scallops are available until quotas are met, generally all year, with fewer harvested in the harshest winter weather. ¹Squid season goes from January to about September, ending once quotas are reached, but we see it mostly in spring, as squid come and go, moving to evade predators such as bass in the summer months. ⁶Striped Bass are found in our waters May through October, but the commercial season is much shorter, starting mid-July until quotas are met, usually mid-August. ⁶Tautog has both spring and fall seasons, peaking in fall, when quotas are reached. ¹®Bluefin tuna swim Cape Cod Bay June through October. The principal tuna fished here, they are closely regulated at the national level, and the season closes when quotas are reached.
